

## Letter of Recommendation

Javier-Aguilar is not someone you can typify with simple categorizations, because he is unique, one of a kind. When I first began teaching him English, I could see that he had difficulty grasping the tertiary nuances of the language. It was only when one day, during our scheduled break, that I noticed him writing out advanced trigonometry in relation to quantum mechanical theory, did I fully understand how to best reach him in a scholastic context. Since that time, his understanding of English has erupted in leaps and bounds, like a volcano flowing with comprehension and understanding. Many of his "free-topic" essays dealt with subject matter such as the relation of time-dilation in a non-heliocentric vacuum, the potentiality of human evolution within other planetary spheres and a fascinating personal supposition of the fusion of String Theory and Guth's M-Theory in relation to the continuous expansion of our universe. Through his unorthodox and asymmetrical approach to problem solving, I feel that he is precisely what any organization would need not only to maintain equilibrium, but experience incalculable growth. Should you find this letter before you, I urge you to seek his membership within your respective entities.

Alexander C. E. Williams,

GLW (E.G.) Program Coordinator

X A handwritten signature in blue ink, consisting of stylized, flowing letters that appear to read "Alexander C. E. Williams". The signature is placed over a horizontal line that starts with a small 'X' on the left.
